

# Safe Community Chrudim 2009

Annual Report 2008

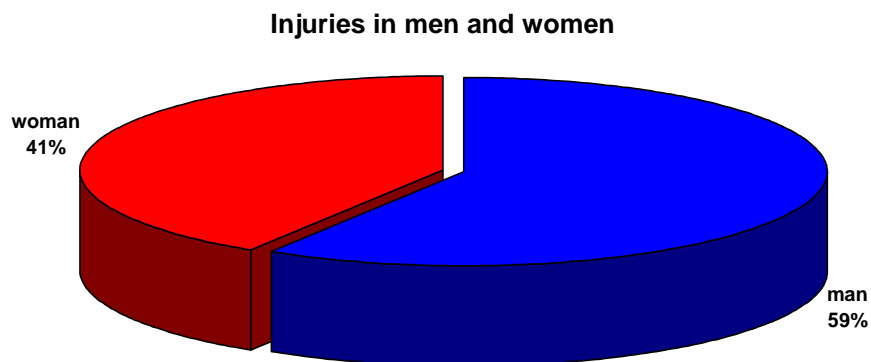

Special enquiry focused on injuries was evaluated by using record sheets for each injury. Those sheets were filled (for this purpose) by surgical ambulance in the hospital of Chrudim as well as by pediatric ambulances and special ambulances.

**All data is recorded only for first treatment of the injury. All data is recorded only for inhabitants of Chrudim and its periphery (Vestec, Medlešice, Topol, Markovice a Vičnov).**

In 2008 in Chrudim there were **1 077 treated injuries** recorded.

Following graphs describe results:

**Injuries by month of occurrence**

**Injuries by month of occurrence - line graph**

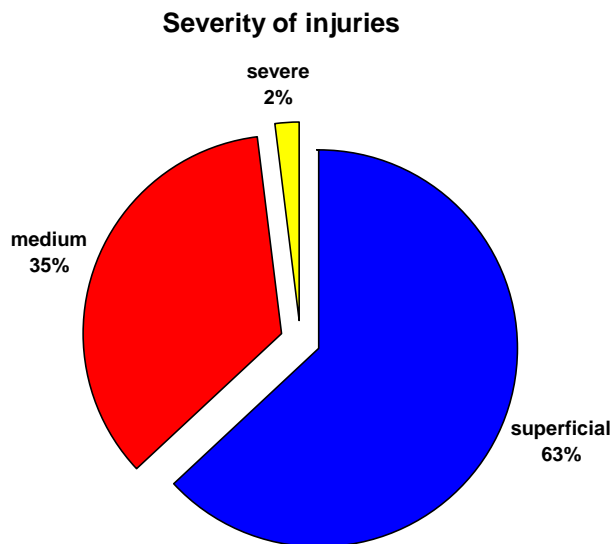

### Injuries by location of origin

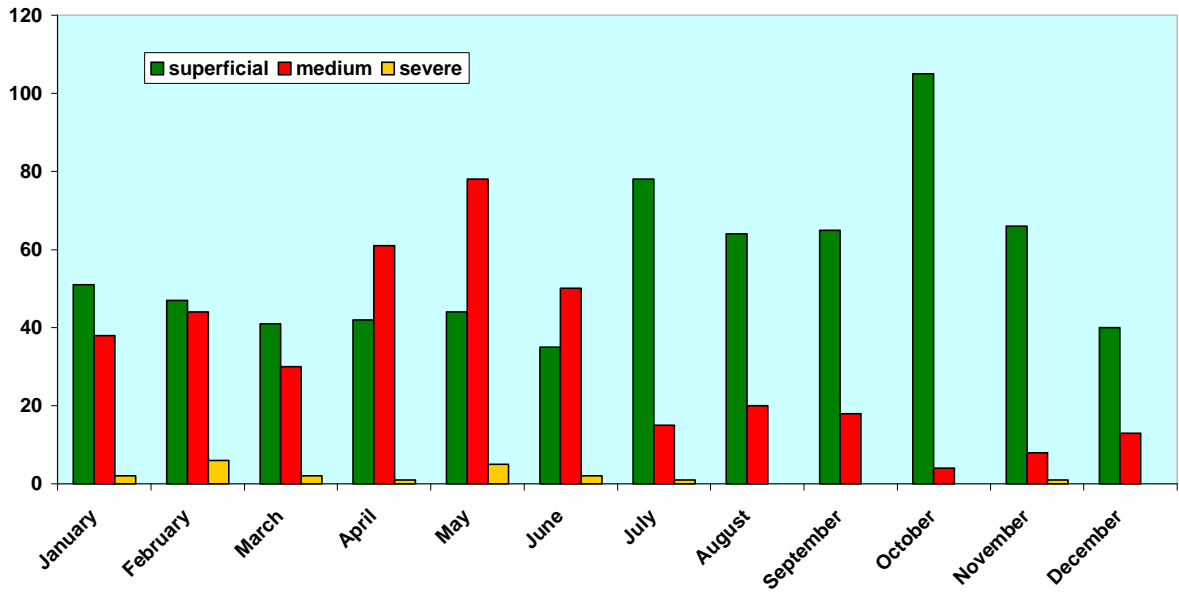

■ in the household ■ on the street ■ at school ■ at the workplace ■ at a playground ■ elsewhere

### Circumstances of injuries

### Severity of injuries - by month

### Had to be treated in a hospital

**Conclusion :**

***In Chrudim during the year of 2008, there were 1077 injured people, that is 4,6% of total number of inhabitants (23 173).***

Bigger group in injuries count by sex are men - 59% injuries, while women - 41% of all injuries. Most numerous group that was part of injuries counting were Chrudim citizens of age 19 – 59 years – adult productive age – 51%, next in size is group of children 7 – 15 years – 19% and people older than 60 years – 15%. Months with highest occurrence of injuries are May (127 injuries), then October (109) and April (104). Least number of injuries was recorded in December (53). Most frequent place of injury is the household (42% of all injuries), then on the street (23%) and on playgrounds (13%). Most frequent circumstances of injuries are those marked as „other“ in this enquiry – 33% for example while walking (outdoor, relaxation walks, walking the dog), in contact with dogs, while dancing, ice-skating etc. Other circumstances are work – 31% and non-organized sportive activities – 19%. Body surface injuries are the most frequent injury type – 59%, then fractures and dislocations – 20% and other types of injuries – 19%. Concerning the severity of injuries, it is mostly - 63% light, surface injuries. Hospitalization was necessary for 7% injuries (tj.76) in 2008.

**Special thanks belong to everyone, who participated on implementation of the Safe Community project in Chrudim.**

Report has been prepared in January 2009
