- Referred to the Office of Health Insurance for the 110 free
- Follow-up needs to empower its clients of about 360
- Specialized consulting services to clients in the 340 free

Gift program

The purpose of the gift plan to develop a culture of intellectual engagement, support and promote a culture

of altruism is poor

: In this plan, healthy gifts and used to inform citizens, who through 137 municipal systems have been collected and the reconstruction and repair will be donated to the needy

In the first 6 months of this year, eight more than 490 items donated by citizens, including refrigerators, stoves, washing machines, vacuum cleaners, and .... Has been distributed among the needy.

Measures taken in relation to the prevention of use tobacco.

Fadak Garden Park opened as the first non-smoking area.١)

Festival as a non-smoking١)

Free smoking cessation counseling to area residents٢)

Introduction to addiction drug addiction camps ٣)

Consultation meetings for addicts and their families.٤)

Indicator 3: 3. Programs that target high-risk groups and environments, and programs that promotes safety for vulnerable groups

Social, and school safety activities in line with the safety group is adolescents and young adults.

Most of this age group is related to the incident.

One of the most important places for human life is at home, Women's education in the homes of

Social goals.

Safe and secure environment in the family of the main activities of this committee is concerned in this

Regard and convenience

This class is a safe place for recreation and parks and vitality, and cultural affairs to women with

Campus activities educational, sporting and cultural area is freely available to women.

Suicide and social problems the world is damaged district 8, which certainly cannot be free from harm

Identification of the causative factors of accidents and injuries in these priority areas 8 Steering

Committee in Tehran to be based on long-term 5-year plan to prevent accidents of this type can be

formulated and implemented. One of the ways to create things and religious centers, enabling the

introduction of religious education in religious education is an ugly phenomenon of suicide One of the

ways to create things and religious centers, enabling the introduction of religious education in religious

education is an ugly phenomenon of suicide

Indicator4 : Programs that are based on all available evidence

Regarding to importance of programs and strategies based on evidences and documents for different age groups and environments related to security in societies, all interferences and executive activities have been on the basis of survey , documents, technical reports, votes of erudite and existing scientific proofs and references . one of researching and scientific centers is researching section related to urban planning & research center and its effective programming that has done numerous investigation in field of scientific survey performance and practical researches about security of societies and other related issues that constitute programs of region's secure society on the basis of these documents also medical universities and effective health services as a scientific center in all cities ' regions have had numerous practical researches about topics related to secure society and region & has used of these experiences for programs based on the evidences. It is obvious that details frame work of the evidences has been finalized with expert peoples view, erudite and related specialists and has been pressed in region's agenda.

In field of programs and strategies based on evidences and documents, necessity of relationship with scientific institutes and back up centers of dependent secure societies and researching sections of Iran's ministry of health and medical training ' shahidbeheshti and researching section of urban planning & research center NGOs which are expert about practical researches as a scientific center about secure society issues have been consulted.

Topic of consultation of the scientific center has been about adoption of policies based on documents for establishing and using of effective and suitable executive strategies.

Conclusion:

The first phase of this project was engaged in texts survey and gathering information about submitted reports in active centers and organizations related to accidents and injuries. In this phase of this project in order to completion of previous data and comparison of collected data from organizations and citizens, a research in Tehran and its 22 regions was designed.

Sampling is in region 8 that includes districts of Lashgaregharbi,Dardasht,Narmak, Madaen, Tehranpars, Vahidiye, Zarkesh,Fadak and Majidieh.

Conclusion of research in this region shows that in 1389, 58.4% of all occurred accidents was done by Vahidiye district residents,2.4%by Tehranpars district residents,1.4%by Majidiye district resident, 9.1by South Narmak district resident,13.6%by Dardasht district resident. 1.3%byZarkesh district resident. Most occurred accidents respectively are penetrating blow(27.7%), collapse(23.4%),and then burn(22.8%).So attention to the causes of these accidents is essential. 97.9% of penetrating blow's cause was cut with sharp objects. So training to promote awareness of citizen in use of sharp tools and objects can be effective.

According to data results we know that usually collapse accident is occurred for student and collegian groups and under 25 age groups. 46.8% of collapse from non-coplanar height relates to fall from the stairs. 62% of these collapses are occurred in autumn; therefore immunizationofstairs andstudents' passages canpreventmanyaccidents.

Data reveals that 68.4% of burns resulting from contact withhotliquidsandsteamorgas and 32.2% of them are occurred for housewives. Bringing to notice about safety points in kitchen is recommended.

Housewives (39%) and workers (31.8%) more than other groups are harmed by penetrating blow that 97.9% of it resulting from working with sharp and

cutting tools.Providing educationalpamphletscontainingsafety pointsabout usingthese toolscanbe useful.

Also results of research show that55.2%of incidents thathavebeenvery severe and required hospitalization, haveoccurredonhighwaysorstreets, so we have done investigation about trafficaccidents. In region 8, 38.3% of all occurrence of traffic accident related to pedestrians and 30.9% todrivers ofmotor vehicles or tricycle. In self- employed group vehicle have caused highest injury (22.9%). This occupational group more than other groups requires transportation on city so they use of vehicle more.

Therefore training of trafficrulesandregulations for prevention of traffic accidents is recommended.

Indicator 6: Evaluation measures to assess their programs, processes and the effects of change

Statisticsoninjuriesresulting fromaccidentsinIranhasemphasized that occurrence ofdifferent typesofaccidentsandinjuriesdue to thediversityandbreadth(from roadaccidentstonatural disasters) isconsiderable.Accidentsas the secondleading cause of deathinallage groupsandthe firstcause ofdeath forpeople underage 40are knowninIran(PreventionandSafety PromotionBureauMinistry of Health report) Safety Steering Committee of distract for two reasons:
