Address: Room 409, #588 Changjianglu, Xigang District, Dalian

Zip code: 116012

Municipality/ City: Dalian, Liaoning Province

Country: China

Phone: 0086-411-83612131

Fax: 0086-411-83612131

E-mail: xgqajj@163.com

The programme covers the following safety promotion activities:

For the age group

Children 0-14 years:

Children safety quality improvement program

Monthly to establish “10-love” (love life, love home, love school, love parents, love teachers, love schoolmates, love learning, love labor, love to help others, and love environment) theme, monthly to select “single-item little star”, select “10-love little star” at the end of the semester, and to carry out “10-love accompanying me to grow up”,

“strive to becoming a 10-love little star”, “10-love talked at the minors forum”, “stay away from drugs, cherish life”, “care for girls”, and “traffic safety alarm tour exhibition”. During the holidays, we organized the students to engage in “reading and taught” reading contest, “adolescence escort” early warning training and adolescent self-care knowledge learning activities.

Road Traffic Safety Quality Education and Safety Promotion

Each school hires a police officer to serve as the vice-chancellor, each semester is provided with a traffic safety course taught by full-time teachers or hired traffic police. We organized class meetings, team activities, essay writing and knowledge contests, and emergency drills. We regularly broadcast warning education films to promote the traffic regulations, perform on-site consultation, distribute leaflets, hold training seminars, explain the knowledge about installation and use of the safety electrical sockets, leakage protectors, pinch-proof door clips, sliding-proof mat and cabinet door lock. We set up a specialized “safety skill training center” to carry out traffic safety promotion training for schools.

During the peak hours of going to or leaving the schools, traffic safety service teams composed of 180 retired old people and volunteers hold 4 “safety mobile posts” to escort the school children to cross the roads and assist the traffic police to divert the traffic. Traffic safety posts composed of the community traffic volunteers were set up

around the schools, sharp bends and steep slopes to maintain traffic order and

escort the students to cross the roads. Road sections prone to accidents around schools were provided with 210 additional traffic safety signs, 36 zebra crossings, 42 speed limit plates, and 9 places with signal lights. Grounds were painted with prompt language “attention to students and one-way traffic

was set around the schools. We carried out speech contest of “traffic safety accompanying me”, displayed the traffic painting works titled “I am involved in civilized traffic”, “public order day” and “civilization accompanying me - little yellow caps in action”. We carried out traffic safety activity of “little hands in big hands” so as to let the consciousness of civilized traffic root into the heart of each child.

Evidence-based safety program: The Ministry of Health promulgated the "Children Road Traffic Injury Intervention Technology Guide" in 2011. The guide summarized the evidences and experiences of the children’s road traffic injury prevention both at home and abroad from the public health point of view through literature review, information analysis, expert seminars and demonstration. Based on China's actual conditions, it comprehensively described the popular situation of our children’s road traffic injuries, related risk factors, intervention means and methods. On the basis of the research results and through establishment of the safety skills training centers, we carried out awareness of road safety and capacity training on children, implemented the "yellow cap" action and “little hands in big hands" traffic safety activities to improve children's awareness of road safety and reduce children traffic injuries in our district.

Youth 15-24 years :
Teenager mental health promotion program

Targeted at the special state of mind of the teenagers, we carried out psychological consulting program titled “spring breeze warms the heart”. Psychological counseling teachers persuaded the students face to face to address mental health problems. We have set up a psychological counseling room, organized “thanksgiving heart and sense of responsibility”

education, and guided the young people to practice "thanksgiving motherland, thanksgiving parents, thanksgiving teachers, thanksgiving others, and thanksgiving life". Dr. Sheng’s Psychological Consulting Office and “Zhixinyuan” Psychological Consulting Office asked the teenagers to keep far

away from the black internet cafes, recommended 10 healthy internet websites, carried out reading contests, OM master list, small inventions that I can do, and green online tours. Adolescence moral service supermarket and teenager quality development center were specially set up.

We developed school, parents and society “3-rest” program – “Xiaoxuntong” card. Each student is provided with a “Xiaoxuntong” card. When the students get or leave the schools, they have to read the “Xiaoxuntong” card to inform their parents. Teachers can communicate with their parents about student situation in the school by means of the network platform every week. Each school is provided a police service room, it strictly controls the management in and out of the school gateway, so as to prevent violence harm event. We tried to eliminate the environmental harm factors through renewing the playground, corridors and sports apparatuses, laying the playground with plastic cement, covering the stair railings and heaters with flexible packages, and covering the edges and corners of various venues and facilities with flexible packages.

Road traffic safety quality education and safety promotion

We carried out traffic safety activities in the schools that employed the traffic polices to serve as the traffic safety instructors. We set up a “red scarf” traffic safety propaganda team. The traffic police brigade sent area police to serve as traffic supervisor to explain traffic laws and knowledge of traffic accident prevention.

We improved traffic facilities and road environment, erected traffic signs, marks and warning plates, and painted the roads with traffic lines. We installed traffic lights and speed-limit cameras along the road sections with relatively serious speeding around the schools. Sharp

bends were provided with turning mirrors to prevent from blocking the cornering line of sight. At the congestion road section and black spots within the community, measures for one-way traffic or turn-left forbidden were taken, signs were installed, so it formed a micro-circulation of the road traffic within the community.

Adults 25-64 years:

Enhance safety awareness and safe environment

We organized our district’s corporate legal persons and corporate safety managerial personnel to participate in safety production knowledge and skills training

organized by the safety production supervision bureaus of the city and our district at least once a year. By the use of square publicity and lectures, we carried out various types of occupational disease prevention and promotional activities. New employees can work on the posts only after they have gone through the safety training, and thereafter, they shall be annually retrained. We designated the internet cafes, printing, and aluminum processing sites and scrap yards as the key sites where supervision and management should be strengthened. We have launched “3-no-hurt” activity of “don't hurt oneself, don't hurt others and don't be hurt” in the nine small business places of our district.

We checked and corrected various places, especially the paint sales stores, gas stations and other dangerous chemicals production units with fire danger, fire prevention, gas leakage, wire aging and unapproved wiring. We carried out safe production inspection at least once every quarter to eliminate the hidden danger and resolutely banned the unlicensed business. We strictly approved the business licenses for fire fireworks sales stores, implemented a 4-level (city, district, street, and community) safety management system, requiring them to comply with the safety distance, and provide of safety facilities and emergency measures. The government carried out “Hundred Days Safety Campaign” and special inspection every year, encouraged the enterprises to perform self-inspection, and focused to solve some difficult problems.

Home safety promotion

Role of the safety products in the prevention of home injuries can not be ignored. Therefore, the community specially offered “home safety products mobile van” to display partial safety products that can be bought on the market. Prices and use of the safety products were labeled on the products, moreover, there are purchasing guidelines for residents to learn and buy the safety products.

To ensure the safety of community residents to use the gas, in cooperation with safety gas appliances exclusive store of Dalian Gas Group, we established a safe gas appliance display base of Xigang District, covering

an area of nearly 400m². Safety gas appliances exclusive store displays and sells about 100 kinds of safe appliances such as qualified and safe water heaters, electric heaters, gas stoves and gas alarms, where gas safety manuals and

promotion leaflets are freely distributed to the customers to buy gas safety appliances, furthermore, activities to replace the old gas appliance with the new one and give complimentary hose folders are often held.

“Safety theme buildings” project made the old management-abandoned buildings appear new look. Under the guidance of the government and with the assistance of all social sectors, the community residents built their homes independently. Residents of the management-abandoned buildings have voluntarily set up 15 teams such as “moral

education”, “legal assistance”, “security patrol”, “civil mediation”, “safety check”, “health”, “sports and recreation activities”, and “protecting the green and keeping clean”. They repaired and maintained flower beds, corners and bare loess, stairs without handrails and damaged steps of their buildings so as to eliminate the injury factors. They repainted the building bodies and corridor walls, drew facades with pictures involving in anti-theft, fraud prevention, safe use of gas and electricity, home safety, fire prevention, and safe travel, hanged safety message and safety and health life guide, resident-made safe living sayings, aphorisms and calligraphy works, thus forming a cultural landscape of the building safety. With one building as one unit, residents organized “safety beside me” seminars, home safety drills, and safety hazards assessed by all residents. The community developed 72 safe community building assessment indicators in 6 aspects for self-assessment, covering civic virtue, safety culture, comprehensive management and environmental safety, etc. we held building work seminar, on-site visit and experience exchange meeting to promote mutual learning among communities and buildings.

Elderly 65+ years:

Elderly safety promotion

For the special elderly group, an appropriate intervention plan was designated for the fall injury. We improved environment safety of more than 300 buildings, paved the road with hidden fall danger flat and removed outdoor misplaced heaps and things to improve the degree of environmental safety. We carried out the “fence project” and “handrail project” and installed 376 fences, and 145 non-slip stairs handrails to ensure that the older people will not fall when going out. We recommended and freely distributed anti-slip mats, anti-skid slippers and safety crutches to the elderly.

We guided the elderly to practice Tai Chi Chuan (sword), softball and exercise balance.

Evidence-based safety program: In 2011, the Ministry of Health promulgated the “Elderly Falls Intervention Technology Guide” that points out: the fall becomes the fourth reason of the injury deaths in China, for the elderly of over 65 years old, it ranks the first. Apart from the death of the elderly resulted from the falls, and they lead to substantial disability and affect the physical and mental health of the elderly. The guidance summarized the evidences and experiences of the elderly’s fall prevention and control both at home and abroad from the public health point of view, and it proposed the preventive measures and methods. We have developed preventive measures according to the guide and improved the environment in our district. We organized the elderly to make physical exercises and provided the elderly with safety prevention measures.

Enhance safety and self-help awareness

We opened 4 series courses - “health care, hobbies, practical knowledge, and cultural knowledge”. Community medical experts explain the elderly how to have a healthy diet, home self-help, mutual assistance, anti-falls, emergency hedging, on-site rescue, safe exercise and psychological adjustment after the illness. In cooperation with the health service

center, the community provided the elderly families with “small family medicine chests” to be used in case of emergency. We installed gas alarms, replaced gas hoses and connector fasteners, and provided sounding kettles for 80% of over 80-year-old empty nested and widowed families. We organized health and housekeeping volunteer service teams to chat with the elderly at their homes, measure blood pressure for the seriously ill lonely old people, and provided massage and monitored their health conditions.

Violence prevention (intentional injuries):

Anti-burglary program:

In 2007, there were 2452 social security cases and 182 people hurt at our Xigang District. But most of them were burglary cases. So all households of the community carried out “nail project”, “peace project” and five-old volunteer patrol. All windows of the houses were installed with anti-theft nails (anti-burglar pins), totaling about 200,000 households. All

residential buildings were installed with security doors. Key positions of the residential area were installed with alarm systems, infrared sensors, video monitoring apparatuses and electronic monitoring facilities so as to build “peaceful buildings”. “5-old volunteers” composed of the police station, community neighborhood committees and community volunteers shuttle in the residential buildings, lanes and streets to check doors and locks, protect the buildings and prevent thieves. In cooperation with the community police and community patrol team, they obligatorily patrol in the nearby residential area, thus greatly reducing the chances of the burglary.

Contradictions and disputes mediation program

Neighborhood committee and public security departments hold regular resident hearing to collect relatively focused problems of the masses and solve their problems so as to avoid the intensification of conflicts and reduce the contradictions and disputes. Community neighborhood committee also specifically opened “10min mediation hotline”. When there is a neighborhood conflict, they can call the mediation hotline, personnel from the mediation

center will arrive at the site within 10min to mediate the contradictions and disputes. The community neighborhood committee also established a “Hongmei Mediation Room” that is specialized in conflict mediation. It will persuade and mediate in the entire process and probate related parties with action and emotion, thus making the neighborhoods a harmonious

and stable relationship.

Legal assistance program

Targeted at residents suffered from intentional harm and in need of legal services, we carried out “345” service project and public safety warning “seven-in-one” project in the peaceful building construction. “3” means that the peace promotion, prevention and building activities enter the families; “4”

means that the security patrol, physical defense facilities, joint household prevention and safety creation activities enter the buildings; and “5” means that lawyers, judges, legal assistance, legal practitioners and volunteers enter the community. To support the “345” service project, we set up “Appeal Xinyuan” legal rights service stations and legal rights clinic, hired lawyers, judges and teachers and students majored in law as legal advisors to provide community residents with free legal services such legal consultation, writing law instruments, and providing economic, civil and criminal litigation services on behalf. The so-called “seven-in-one” means that procuratorate established convenient workstations to visit the streets and communities; the district court sent judges to station in the 6 community neighborhood committees to explain laws with cases and resolve civil disputes; we organized “lawyers to go to the communities” to provide law advices and legal assistance; we established women and children rights stations, harmonious family stations and women's spiritual home to receive and deal with women and family rights appeals.

Prevention programs for high-risk groups: Old empty-nesters

Aimed at special empty nesters group, the government invested to screen and train the unemployed persons to become nursing staffs to take care of the empty nested elderly one to one. Medical service agencies opened green service hotlines to offer medical advices and community physicians went to their homes to offer site services. Hospitals

organized nurses to measure blood pressure of the elderly, provide health advices and guide safe medication. The empty nested old people’s neighbors were designated as safety volunteers to visit the elderly every day, remove the hidden risk and greet them. Emergency doorbells were installed at the homes

of the old people who need care and their nearest neighbors’ homes, in case of need, the old people just press the button to get timely assistance, thus forming a long-term healthy “neighborhood watch” relationship. In cooperation with the social workers, gas and power sectors, we paid calls to the oldest and empty nesters, which covers water, electricity,

gas, heating, anti-burglar and fire prevention, so as to facilitate the life of the empty nesters and greatly improve the safety factors.

Migrant workers

We built apartments for the migrant workers to live together at the communities so as to reduce the risk of injury. We carried out educational activities involved in fire safety, fraud prevention and anti-theft within apartments. We improved apartment management to avoid fighting and fire to enhance the safety awareness of the migrant workers and reduce the accident. We set up “home of new Xigang people” and provided services such as employment, training and legal rights for the migrant workers. We held “employment street” recruitment for the migrant workers once a year to provide employment guidance, free distribution of employment manuals and safety manuals, answer the knowledge related with the laws and regulations, provide the migrant workers with convenient way to employment and security basis, and improve the employment rate of the migrant workers. We organized regular “safety production knowledge contest” to improve migrant workers’ safety awareness and skills.

Homeless people

To cooperate with the community neighborhood communities, volunteer organizations and the civil affairs bureau, and by the use of “rescue shelter”, we carried out social assistance for the homeless people. The rescue shelter was equipped with maternal and child room, mental room, isolation room, observation room and recreation room. The city rescue team, volunteer rescue persuasion team and volunteer mother service

teams participated in the rescue of the homeless people. They helped and cured 1450 homeless patients, and found their families for about 600 missed people.

“Henan People” Taxi Association

There are 67 Henan membership households of taxi drivers at the Shisong community. We reminded them to treat themselves to be “New Xigang People” and love their second hometown. We posted common safety tips in each taxi and called drivers to achieve “10-do and 10-don’t do” related with traffic safety. We organized the drivers to participate in traffic safety education, with the theme □ your safety is your family's

safety, □ your safety is passengers’ safety, □ your safety is pedestrians’ safety, thus further improving the safety awareness and reducing the accident.

Association members didn't suffer from traffic accident. Community neighborhood committees and volunteer organizations often go to visit the drivers and distributed driver's family "Letter to the driver friends and family members", hoping that his wife could do "10-do" to ensure her husband a good health and a good mood. We educated drivers' children to persuade their parents to comply with traffic rules, so as to form an atmosphere of the whole society to concern about the traffic safety and improve their family happy index in the form of "little hands in big hands".

Safety security program of the social old-age service institute

We trained nursing staffs from the 3 welfare institutes, home for the elderly and community old-age service center on knowledge about the elderly care safety, prevention of food poisoning, fall and medication safety. They could start working only after having passed the examination and obtained professional qualification certificates. We provided the old people with humanized services, such as setting up different sounds of the safety doorbells, so we could judge who needs our help just based on the sound of the bell. When arranging the bed position, power sockets and heaters should be avoided. Both sides of the corridor, bedside, washing room and shower room were equipped with handrails to prevent fall of the old people. Nursing skills and safe comfortable living environment of the 17 community old-age service centers and about 200 old people were guaranteed.

Dr. Sheng's psychological consulting room

Dr. Sheng's psychological counseling room has become a brand. Psychiatrist held counseling seminars during the holidays, Adolescent Psychiatrists hold consulting seminars during the holidays. They took concentrated consulting and face-to-face consulting methods to provide psychological advises for the adolescents. Targeted at lack of confidence and study-weariness of the migrant children, we eliminated their psychological barriers through playing hand in hand games and "I love my family" to display their talents. Targeted at school youngsters' adolescence health and exam anxiety, we performed psychological counseling. There are more than 200 young people to benefit from it.

"Friends of Taxi"

Today, there are 6 large taxi companies in Xigang District, with a total

number of about 1,300 taxis. The taxi companies have set up "Friends of Taxi" club to provide management and services for the taxi drivers. Drivers participating in the club must have complete driving documents, who enjoy a continuous driving time of over 2 years. Drivers participating in the club must sign safety responsibility agreements with the company, committing to ensuring the safety of the vehicles and passengers, and to do: it should check the car, especially the brake, lights, steering system and horns for their safety before driving the car; fire extinguisher should be equipped; and to drive defective car on the road is banned.

The Club performs unified management over the cars and drivers, it holds a routine safety meeting once a month; traffic polices and veteran drivers are invited to give lectures on traffic safety regulations and accident case analysis; organizes to inspect the cars, designates special persons to repair the car in case of having found a hidden trouble, and the car can be driven on the road only after all troubles are removed. The Club designates special persons to investigate and deal with taxi drink driving, overdriving, driving while receiving phone call, not-wearing seatbelt, chatting while driving, and illegal passengers up and down. For serious violation of the regulations, the contract will be terminated.

Home of the mentally challenged children – Rixin School

Rixin School is a school of about 100 mentally challenged children of Xigang District. The school has taken many safety measures to prevent school injuries, e.g.: activity room walls were packaged with soft materials, edges and corners were rounded, barrier-free access was provided, and handrails were installed. In addition, it opened a class to make small arts

and crafts, all students must be accompanied to go to and leave the school, if the parents can not take their children home, community volunteers will escort them home.

Since the Rixin School enrolls students all with intellectual disabilities, there is a problem of communication barriers. In order to enrich opportunities to contact the society, Xigang District authorities have organized "Loving Father" and "Loving Mother" teams composed of soldiers and officers, community Party members, and floor leaders, who are paired

with the students of the Rixin School. Army's "Loving Father" presents the children books, school bags and pencils, etc., and takes them to the barracks to jointly experience military life. "Loving Mother" teaches them how to rub shoes, make their beds, perform laundry, and develop their ability to earn a living and enhance the confidence of their lives.

“Children's Home”

Since Zhanbei Neighborhood Office of Xigang District is located at the city center, there are lots of floating people. Street children are often found around the train station and bus terminal. In addition, there are more and more migrant children yearly, and unattended children of working families and military families have become a relatively serious problem. Targeted at this problem, the neighborhood office opened a children's home in 2008, and relying on the “children's home”, we carry out the following jobs:

- We helped the street children in cooperation with Dalian Relieve Service Station and BBC Radio. Dalian Relieve Service Station is responsible for implementation of specific relieves. We have helped a total number of 103 street children in the last 3 years.
- We have opened a “trust class of the children of the military personnel”, organized the children to learn culture, and carry out minor military training and speeches that I love my hometown.
- We have opened trust class for children of migrant population and working-parents families during the summer and winter holidays to carry out cultural studies, explain or simulate self-help and mutual-help exercises, teach adolescent education and how to deal with strangers. We have offered the children over 1,000 extracurricular books. We took children to carry out recreational and fitness activities and have popular computers class so as to adapt themselves gradually to urban life and reduce the sense of inferiority.
- We have opened parents training class of the migrant workers to educate the parents to concern about children’s safety, teach them how to educate their children to prevent food poisoning, fire prevention, fraud prevention and anti-accidental injury. We have hosted a total number of 45 training courses and trained parents of 897 person/time.
- We have set up "holiday tutorship class” with retired teacher volunteers to take care of the students to do holiday homework; and invited professional instructors to educate them on fire prevention, traffic and psychology.

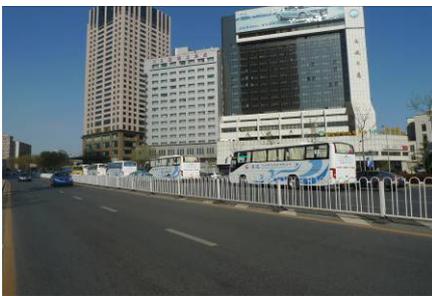

Evidence-based program

Road traffic safety program

Xigang District is one of the main downtowns of Dalian. There are many motor vehicles. During peak traffic hours, traffic flow is often saturated, so it is very dangerous for children, the elderly and the disabled to cross the roads. For this reason, bay-type stops were built in the busy streets with large traffic flow and traffic junctions in our district.

It could avoid the buses entering and leaving the bus stops to occupy the carriageways and side-by-side stop, furthermore, it could avoid possible traffic accident resulted from the walking people and passing vehicles and scratching accidents between vehicles, thus improving the passing capacity of the vehicles and ensuring pedestrians' safety at the intersections.

The road guards were erected along the main roads and busy downtown streets in our district. So vehicles driving in opposite lanes are separated and pedestrians can not go straight across the road, thus increasing the average speed of vehicles and greatly reducing the traffic congestion, presence of hidden traffic accident risks and occurrence of the traffic

accident. Red anti-skid road surfaces were provided at bends, slopes and accident-prone sections in our district, this doesn't only warn the drivers with color, but also significantly increases the pavement dry and skid-resistance on raining days, shortens the braking distance, and effectively reduces the speed of the passing vehicles and ensures traffic safety.

Evidence-based safety program: "Report on Road Traffic Injury of China" jointly developed by Injury Prevention and Control Center of School of Medicine under Jinan University and Injury Prevention and Control Center of Chinese Preventive Medicine Association was published in the professional core journal "Chinese Journal of Epidemiology" Vol.28 No.3, 2007, and it analyzed long-term trends and impact factors of China's road traffic injuries. The report concluded that road safety was a public health problem and road traffic injuries were preventive and controllable. It should establish a government-led, multi-sector cooperation and whole social participation road traffic injury prevention working mechanism, treat the road traffic injuries as a major priority of the public policy, adopt comprehensive measures for the environment, vehicles and road users, set up a road safety system, emphasize people's behavior change, prevent the occurrence of road collisions, and minimize the loss of the road traffic injuries. Therefore, we have carried out

activities to let the traffic safety enter the communities, enterprises, schools and families in the process of the safe community building, extensively performed traffic safety quality education, improved the safety awareness of community residents, meanwhile, we have improved the road traffic facilities.

Injury monitoring: Disease Prevention and Control Center (Xigang District Hospital, community health service center) of Xigang District, Dalian

Number of injuries each year: 14349 persons in 2007
14074 persons in 2008
14140 persons in 2009
13770 persons in 2010
10776 persons in 2011

Monitoring number of persons: 36
start time for Monitoring: from 2007 to 2011

Publications:

Produced information materials: “Old People’s Safety Brochure”, “Home Safety Brochure”, “Fire Safety Brochure”, “Traffic Safety Brochure”, “Children Safety Brochure”, “Occupational Health Popular Science Knowledge”, “Enterprise Employees’ Safety Knowledge Reading”, “Youth Safety Education Knowledge Reading”, “Common Sense Concerning Residents’ Health and Self-Help and Mutual Assistance”, and “Family Safety Manual”.

Video data: “Fire Prevention Promotion Enters Community”, “Publicity and Education Series of Safety Production - Education Chapter of Accident Cases”.

Working staffs for safe community building:

Mr. Qiu Xiaosuo, deputy head of Xigang District

Professions: part-time or full-time 120

Permanent: 18

Temporary: 102

Specific cross-sectoral leadership group for safety promotion: Xigang District Safe Community Building Promotion Committee

General public health/health promotion group: District Safety Supervision Bureau, District Civil Affairs Bureau, District Traffic Police Brigade, District Civil

Affairs Bureau, District Education Bureau, District Fire Brigade, District Public Security Branch Bureau, Disease Prevention and Control Center of Xigang District, Xigang Hospital, 9 community health service centers and 2 community health service stations.

International commitments:

Organized Study visits for the following visiting communities:

In March, 2009, went to Beijing and Shandong to make field trips on the safe community building;

In May, 2009, went to Shenyang to participate in safe community building training of Liaoning Province;

In September, 2009, went to Chengdu to participate in the safe community standards and building methods training sponsored by "COSHA";

In April, 2010, went to Tai'an, Shandong to participate in the national safe community building instructor training.

Participation in Safe Community conferences:

National safe community work conference at Chongqing , November 2010.

Asian International Safe Community network meeting at Shanghai, May 2011.

The 20th International Safe Community Conference, September 2011.

National safe community work conference at Beijing, November 2011.
